ADDING VALUE & REDUCING RISK IN GLOBAL PAYMENTS

GETRONICS

"Getronics is a leading provider of Information and Communication Technology (ICT) solutions and services to the e-business world. We provide a complete service, from consultancy and design right through to implementation and continuing support.

"We've been delivering systems to retail banking clients since 1962, and our expertise is extensive worldwide. With 30,000 employees in over 35 countries, Getronics works with many of the world's largest companies to help build their futures through world-class ICT infrastructures.

"Financial institutions are important clients for Getronics. Getronics helps them worldwide to build and maintain their mission-critical applications and IT infrastructures. We are able to offer them vendor-independent services consistently around the globe.

"This is especially true when it comes to designing and implementing solutions that add value and reduce risk in global trading and payments activities. Getronics Japan has more than a decade of experience in developing STP solutions for banks' global-payments operations. Getronics Japan has nurtured a unique capability as only one vendor in the world that is certified from SWIFT both for 'Authorized Interface' and 'Accredited Services (SAS).'

Hideyuki Takei

"We offer system-integration services to realize payment STPs with SWIFT connectivity. We also provide development services of specific solutions for banks to adopt new market infrastructures such as CLS, GSTP, etc. We are planning to support SWIFT's e-Trust solutions not only with banks, but also corporate customers to enable secure e-commerce. The core of our service consists of our consultation ability for SWIFTNet implementations.

"The financial-services market represents the top client group served by Getronics worldwide. Getronics helps this market by building and maintaining their mission-critical applications and IT infrastructures. We provide this market with vendor-independent services and customer interaction solutions around the globe.

"We will keep strengthening our partnership with major financial institutions through execution of large-scale development projects to integrate emerging market infrastructures and to realize STP. We also expect that our capabilities to help banks to adopt SWIFT's e-Trust infrastructures will enable us to further extend our reach from financial institutions (F2F) to business to the finance (B2F) e-commerce market."
